

Extra credit problems

Math 427

0. Find a mistake or misprint in the book. (The score depends on the type of mistake.)

1. Describe all the motions of the Manhattan plane.

2. Construct a metric space \mathcal{X} and a distance preserving map $f: \mathcal{X} \rightarrow \mathcal{X}$ that is not a motion of \mathcal{X} .

3. Note that the following quantity

$$\tilde{\angle}ABC = \begin{cases} \pi & \text{if } \angle ABC = \pi \\ -\angle ABC & \text{if } \angle ABC < \pi \end{cases}$$

can serve as the angle measure; that is, the axioms hold if one changes everywhere \angle to $\tilde{\angle}$.

(a). Show that \angle and $\tilde{\angle}$ are the only possible angle measures on the plane.

(b). Show that without Axiom IIIc, this is not longer true.
